

How do I install a patch?

Last revised Wednesday, 24 March 2010

Installing a patch is as easy as using the Joomla! installer to override the current files. Patches have version numbers and letters. Letters go from A to Z, so a patch labeled *E* is more recent than a patch labeled

B

. Patches are good for the versions they indicate. So, a patch

com.linkr.patch-231c

is good for

Linkr 2.3.1

as well as for a patched version

Linkr 2.3.1(b)

, but not for an older version

Linkr 2.3.0

.

NOTE: [Clear your cache](#) after installing a patch.
