

## **I see Linkr code instead of buttons/related links.**

Last revised Thursday, 16 July 2009

---

Make sure the Linkr plugin is enabled in *Administrator » Extensions » Plugin Manager » Content - Linkr*. If it is, then there probably is a conflict with one of your content plugins. Check to see if you have other content plugins that do not work, then head to the [support page](#) and give a short list of which content plugins are currently enabled on your web site.
