

Linkr hangs/freezes/displays the loading icon endlessly!

Last revised Thursday, 13 August 2009

This is most likely a javascript bug. Try upgrading to the latest version of Linkr. If that doesn't do the trick, head to the plugin's page in *Administrator » Extensions » Plugin Manager » Content - Linkr* and set the **Compress JS Files** parameter

(advanced) to "No". If all fails, head to the

[support page](#)

and explain what you were trying to do. Make sure to specify which browser, editor, Joomla version and Linkr version you're using.
